## SUMMARY

Own messaging, billing and event infrastructure on a 25-engineer team at a commerce platform for Shopify merchants. Node.js/TypeScript on GCP and AWS, PostgreSQL. Two Google Summer of Code cycles in C++/Qt at VideoLAN and MuseScore.

## EXPERIENCE

### BIK.AI (YC + Sequoia Backed)

Software Engineer II

Software Engineer

Bengaluru, India

Apr 2026 – Present

Dec 2024 – Mar 2026

- Root-caused a **Pub/Sub** backlog across two queues the team had been absorbing with a **38-node scale-out** that often never scaled back down, then rebuilt consumer flow control, ack-deadline handling and backpressure. Combined backlog fell **1.26M messages to under 4K**, worst-case delivery delay **2.4 hours to 94 seconds**, and the scale-out came off.
- Own billing across every revenue channel.** Redesigned AI billing after finding stores drawing **2-10x** their contracted allocation: a central versioned rate card keyed on tier, country and usage type, with credits denominated in money rather than operation counts. Separately recovered **12.5% of email** billing revenue lost to a 3-hour daily cutoff, and fixed a **WhatsApp** credit runner hardcoding 18:30 UTC as midnight across five call sites, costing every non-IST market up to **21 of 24** billable hours.
- Stopped recurring sync failures across **250+ Shopify stores** with a resumable orchestrator/executor **state machine**. Run-scoped checkpointing, **idempotent retries**, paced execution under GraphQL rate limits. Reprocessed **2M+ records** with zero duplicates, flag-gated behind a legacy fallback.
- Cut campaign analytics page load from **20s to 200ms** while doubling page size, rebuilding it on a Postgres-first data layer with on-demand **Elasticsearch** refresh and age-tiered caching.
- Consolidated **WhatsApp, email, RCS and SMS** broadcasts onto shared **AWS Step Function** orchestration, replacing a separate delivery path per channel with one provider-agnostic path. Launched RCS on it for **50+ enterprise clients**, now carrying **2.5M messages/month**.
- Built the external webhook system forwarding platform events to merchant endpoints, then isolated delivery per store on **Cloud Tasks** after tracing duplicate deliveries to ack-deadline overruns, with a 30s attempt timeout, three bounded retries, and a 24-hour health evaluator that auto-blocks endpoints past a **50% failure rate**.
- Designed and built the multi-channel alerting platform that replaced email-only merchant notifications, now the path the **other three engineering pods** ship every alert type on. Role-based routing, per-instance delivery tracking, **rate limiting**, admin console.
- Carry on-call for the systems above. Drove **SOC 2 Type 2** and **ISO 27001** to certification with the CTO; company-wide AWS/GCP administrator with org-level **IAM ownership**.

### Google Summer of Code Contributor

VideoLAN (VLC Media Player)

May 2024 – Oct 2024

Remote

- Shipped multi-file metadata editing in **C++/Qt** into a codebase maintained by **50+ developers across 15+ countries**: extensible metadata-provider interface with cross-file command-pattern undo/redo, cutting **75%** of the steps in multi-file tagging. Mentored by VideoLAN founder Jean-Baptiste Kempf.

### Google Summer of Code Contributor

MuseScore

May 2023 – Oct 2023

Remote

- Built MuseScore 4.6's inline popup framework in **C++/QML** on Qt's model-view architecture. Later GSoC cohorts extended the same infrastructure.

## OPEN SOURCE

**envswitch**: zsh plugin for monorepo environment switching. Loads `.env` by directory and branch, encrypts shared secrets, unloads on branch switch. Adopted across my engineering team.

**MuseScore**: contributor since 2023, 10 merged PRs across the inspector, UI framework and platform layers.

## TECHNICAL SKILLS

**Languages**: TypeScript, JavaScript, Python, SQL, C++/Qt

**Data**: PostgreSQL, Elasticsearch, Redis, Firestore

**Backend**: Node.js, Express, REST APIs, GraphQL, Microservices, Event-Driven Architecture, Distributed Systems, Message Queues

**Cloud**: Google Cloud Platform / GCP (Pub/Sub, Cloud Tasks, Cloud Functions, Kubernetes, GKE), AWS (Step Functions, Lambda, IAM), Docker, CI/CD

## EDUCATION

Ajay Kumar Garg Engineering College (Dr. A.P.J. Abdul Kalam Technical University)

B.Tech in Computer Science and Engineering

2020 – 2024

Ghaziabad, India
